3) Verified concern. found LF strut spring collapsed. RF strut showing signs of wear and dry rot around strut bushing. Both need replacement along with alignment.

- During inspection, found lower control arms with play. Need replacement along with alignment.

- During inspection, found calipers in front only being held on by one bolt each side, resulting in caliper sliding around causing uneven wear on pads. Along with caliper movement, causing caliper to scrape wheel inner barrel.

- During self-test on vehicle, found code for RF wheel speed sensor. Along with hub play, suspect hub bearing damaged wheel speed sensor. New hub and sensor.

4) Found oil leaking from two areas, timing cover and rear main seal.

5) Found numerous codes for TPMS, Vapor management valve, and wheel speed sensor.

- Pried out new vapor management valve.

- TPMS sensors will not train. Tire pressure module refuses to connect to scan tool. Verified fuse 26 OK. No voltage going to module. Verified circuit OK with .3 ohms and able to light a bulb. Suspect faulty BCM due to power not being sent through BCM into that respective circuit.

6) Verified concern. Found blower motor only working on setting #4, then stopped working. Connections OK. Suspect resistor and motor.

- Found A/C leaks at lines to condenser, Schrader valves and around expansion valve.
